Objective

To obtain an internship in which I can assist on software engineering project using my technical skills.

Education

Lovely Professional University, Jalandhar   **Degree Expected: June 2022**
Computer Science and Engineering

Technical Skills and Coursework:

- Linux, Windows
- C, C++, HTML, JavaScript
- ReactJs, Bootstrap, Material UI
- Data Structures and Algorithms
- Object Oriented Design
- git

Projects

- **CLister (Web App)**   **GitHub**   **Live**
  A progressive web app which helps you to take important notes in the form of a list. ReactJs is used for frontend and Firebase is used for backend. You can install application directly on windows and Android as it a PWA. Material UI library is used to create the UI.
  Technology used: ReactJs, Material UI, Firebase

- **CLister (Android Application)**   **GitHub**   **Live**
  I needed a native android app which can work in conjunction with the web application, So I created the CLister android application which is written in React Native.
  Technology Used: Selenium, Python

- **LPU OPT Finder**   **GitHub**
  A selenium script written in Python, which tries to find the password of the LPU Wireless by doing a brute force attack on it.
  Technology Used: Selenium, Python

- **Portfolio Website**   **GitHub**   **Live**
  A website to represent my space on internet. It contains all my projects and link to the repositories. It is written in NextJs for SEO purposes.
  Technology Used: NextJs, Material UI
